

CLUTCH BLEEDING TOOLS

Air is the enemy of any hydraulic clutch system. When trapped, air deteriorates the response of clutch systems and can leave the clutch assembly mushy and weak. Making sure that the clutch system performs to its top potential and getting rid of this “spongy pedal” feel often requires a complete clutch bleeding.

ACS now offers a range of clutch and brake bleeding tools that contain all the equipment necessary for performing an impeccable clutch bleeding in only 15 minutes and with only one person.

Description	Usage	Features	Benefits	Part Number
