

230MM

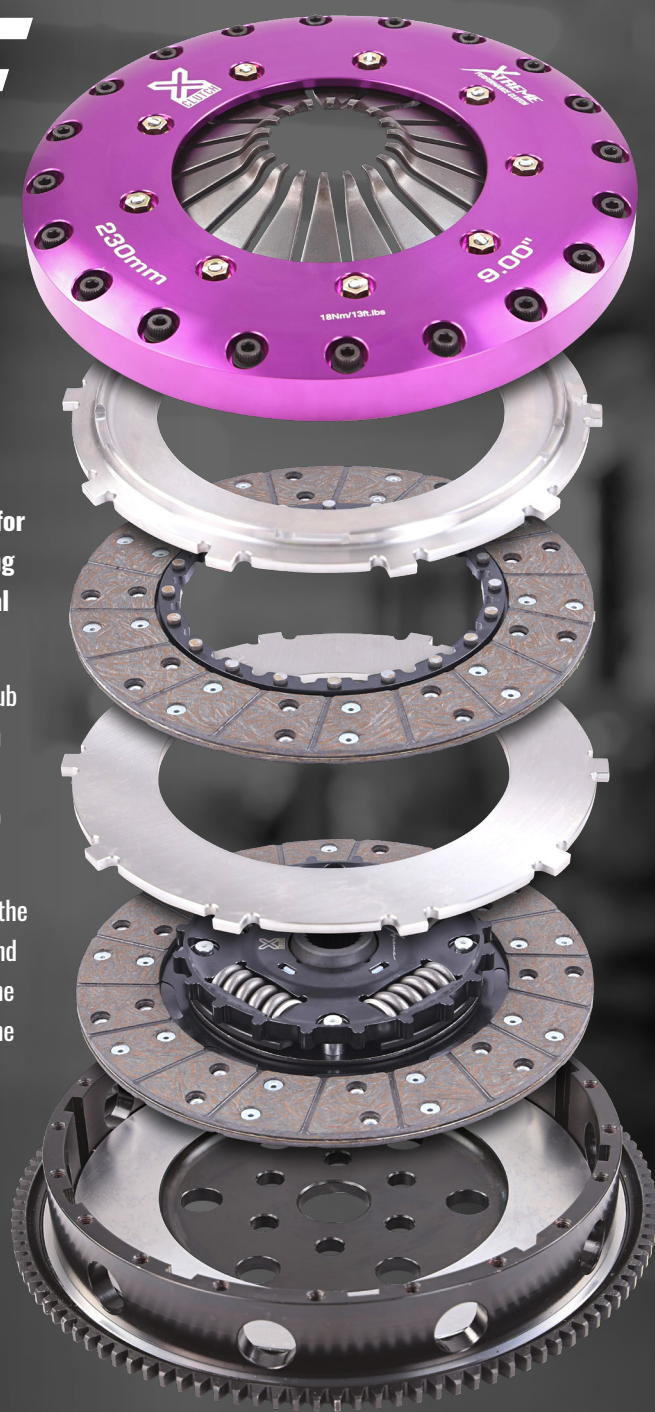

SPRUNG TWIN PLATE ORGANIC UPGRADES

Xtreme Clutch now offers a range of twin plate sprung organic upgrades for a wide variety of makes and models. Engineered to provide a great driving experience for high powered street cars, these kits offer an exceptional level of driveability for high torque capacity clutch kits.

The new sprung kits also offer improved dampening over the existing rigid hub range. This helps reduce the Noise, Vibration and Harshness (NVH) that is often transmitted through to the cabin in traditional rigid hub multi-plates. This dampening also helps reduce shock-loading on the transmission in comparison to rigid hub applications.

Developed as a clutch to be used in an extensive variety of different vehicles, the 230mm twin plate sprung organic clutch kits offer a lightweight construction and given their size, are well suited to small capacity turbocharged applications. The introduction of the sprung hub organic version of this popular clutch provides the ultimate solution for small capacity but highly modified street cars.

- Lightweight Alloy Pressure Plate
- 4140 Chromoly Flywheel
- Serviceable and can be retrofitted with different disc types
- Complete kits including CSC or Release Bearing
- 1000 Nm Torque Capacity
- Well suited to high performance small capacity engines

"Our mission is to provide the highest Quality, Innovation & Service to our customers across Australia and around the world"
