## CLUTCH TOOL HIRE PROGRAM

Clutch technology has moved forward over recent years, whether it be a Self-Adjusting Clutch (SAC) or a Dual Clutch Transmission (DCT), vehicles with these types of clutches are becoming more and more popular on our roads and many are now entering the aftermarket for repairs with factory warranties expiring. Many of these require specialised tools to remove, refit and set up the clutch. The tools required can be expensive and cost prohibitive for many workshops for a potentially 'one off' situation.

**Australian Clutch Services are committed to offering our customers a "Total Clutch Solution"**

In addition to our range of specialised clutch tools available for purchase, ACS now offer customers working with SAC or DCT clutches a solution by providing a 'Tool Hire' program.

Account customers who purchase any ACS brand SAC or DCT Clutch Kit can now hire the required tools to remove and refit the clutch.

To facilitate this, ACS have added a range of hire tools to our warehouses for easy access to our customers.

When a clutch kit is ordered, the 'Hire Tool Kit' can be ordered at the same time (a deposit and a small fee applies to cover handling and return shipping). The Hire Tool Kits come security sealed with a return freight consignment note. When the job is completed, all the mechanic needs to do is ensure that all components of the tool kit are undamaged and accounted for, attach the consignment note, and call ACS on 1800 CLUTCH to arrange the pick-up.

The tool kit will be returned to Quality Control at the ACS head office for checking and re-sealing of the security seal, ready for the next hire. The deposit will then be refunded to the customer.

The program makes it simple and cost effective for workshops to take on this new technology. The initial range covers SAC removal and installation tools as well as DCT tools for the dry clutch type, more tools will be added to the program over time. ACS have also developed a series of 'how to' videos to assist in using the tools with a 'QR' code for easy access.
