

ACS FEATURE CONVERSION CATALOGUE

Xtreme Clutch have recently released a new conversion catalogue designed as a guide for those looking for a custom clutch solution when doing an engine or gearbox conversion on their vehicle.

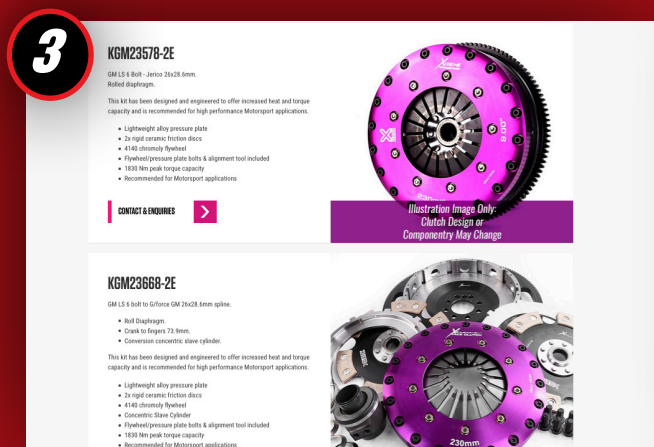

The catalogue covers a range of the most popular conversions in the market and includes details of the kits that have already been developed by Xtreme Clutch for those applications.

Please note that ACS will still require the relevant documentation to be completed and checked off by their engineering team before releasing these custom clutch kits for sale.

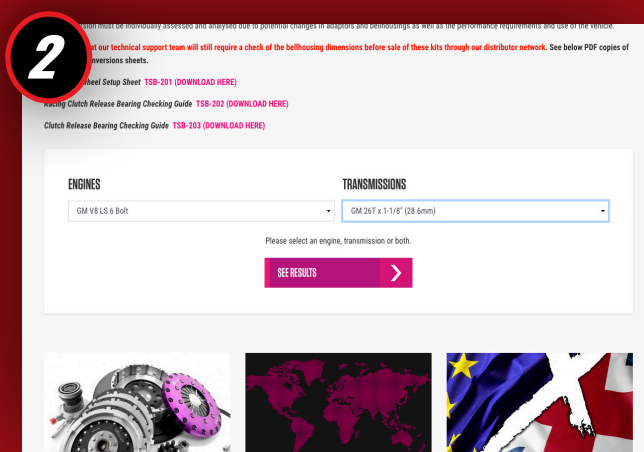

HOW TO USE THE CATALOGUE/ORGANISE A CUSTOM CONVERSION:

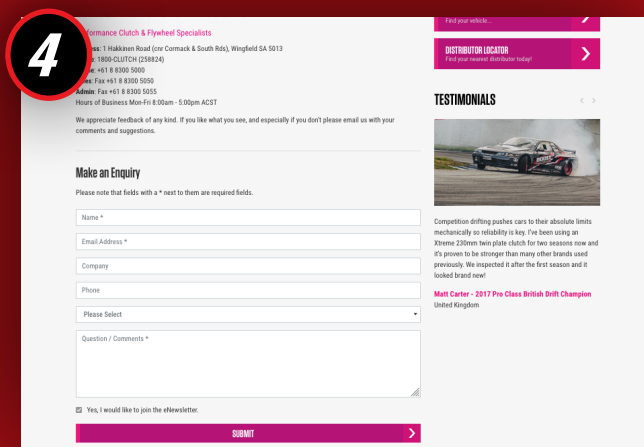

Visit xtremeclutch.com.au and hover your mouse over the "Product Range" tab. Then click on "Conversion Clutch Kits". Here you will find information on the conversion kits as well as links to the relevant documentation required from the customer.

Browse the clutch kits that are generated. You may find that some kits have different notes for adaptor thicknesses etc. Select your desired clutch kit based on driveability and torque capacity requirements.

Select your desired Engine and Gearbox combination from the list. Please note that if you cannot find your desired engine or transmission, Xtreme Clutch can still assist with a custom clutch for the vehicle. Please contact our friendly sales team for more information.

Fill out the required gearbox dimensions sheets provided at the top of the page. Contact the sales team at Xtreme Clutch to discuss the kit options for the vehicle. The sales and engineering teams will be able to review the dimensions and provide a recommendation on the best kit for the application. This can then be quoted by the sales team.

"Our mission is to provide the highest Quality, Innovation & Service to our customers across Australia and around the world"
