

DON'T MIX IT MATCH IT!

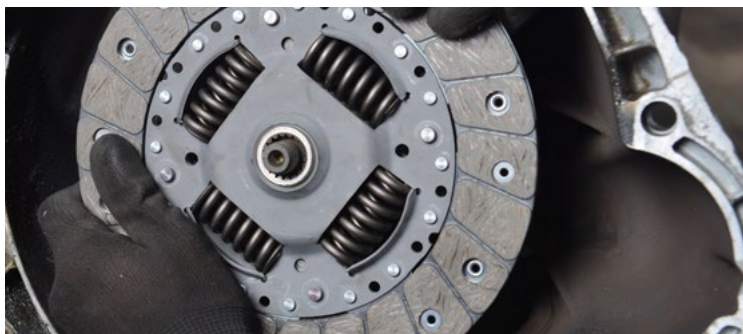

MATCHED COMPONENTS

A clutch system comprises multiple components that are designed to work together.

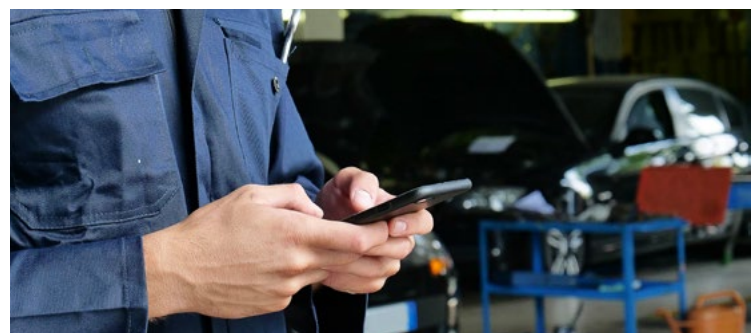

ACS' 25 years of experience & technical knowledge enable us to develop clutch kits that provide our customer the best quality product at a competitive market price.

You'll often get a request for an individual clutch component rather than a whole kit. Removal of a gearbox is a timely process so accurate diagnosis & an understanding of the customers' needs is paramount to prevent unnecessary removal & refitting of transmissions.

Replacing a clutch friction plate or a thrust bearing in isolation & not as part of a matched kit can potentially cause clutch operation failure.

Our team are available to offer support & advice when you need it and a simple call to **1800 CLUTCH** can save the mechanic / fitter hours of wasted labour time.
