AUSTRALIAN CLUTCH SERVICES

FLYWHEEL RANGE

The modern motor vehicle now has a variety of transmission types to get engine power to the drive wheels economically. In more recent years the emergence of the (DCT) Dual Clutch Transmission & the (CVT) Continuously Variable Transmission are becoming more common & are also coming out of factory warranty.

These transmissions utilise the (DMF) Dual Mass Flywheel technology which as we know are not serviceable items & must be replaced when outside of factory specifications when replacing a clutch.

As Australasia's premier Clutch & Flywheel Specialists, ACS are continually expanding our range of flywheels to cover these new applications. Our range has been developed as a direct fit replacement & is backed by our nationwide warranty.

Continuously Variable Transmission

FAU302DM

Dual Clutch Transmission

FAU200DM

Our range covers:

- Dual Mass Flywheels – Manual Transmissions
- Dual Mass Flywheels – Dual Clutch Transmissions (DCT)
- Dual Mass Flywheels – Continuously Variable Transmissions (CVT)
- Single Mass Flywheels – Manual Transmissions
- Single Mass Conversion Flywheels – DMF to SMF
- Custom Flywheels – Non-factory Engine / Transmission configurations
